

Boone Reynolds - Full Stack Web Developer

Tulsa, OK | 918-346-8902 | boone.reynolds@gmail.com | **GitHub:** boonereynolds | **LinkedIn:** boonereynolds

----- SUMMARY -----

I am a full stack web developer with a passion for the outdoors and all things internet. I am a fresh graduate of General Assembly's Web Development Immersive where I learned HTML5/CSS3, JavaScript, jQuery, Ruby, Rails, MEN and MEAN stack among many other things. Due to the fast-paced nature of the course, I have honed my time management skills to a fine point.

Most recently, I worked at an outdoor recreation startup that provides unique camping experiences to groups with little to no previous exposure to the outdoors. Through this position I was able to build solid communication skills with clients by translating their desires into quality results with limited time and resources. Most importantly, I learned that death is in the details. It's never fun to be caught in the woods during a storm without proper equipment.

I am excited to combine the skills from my previous career with my newly-acquired technical skills to become a developer who can effectively communicate with clients and deliver their ideas in new and creative ways.

----- SKILLS -----

Technical: JavaScript | HTML5 | CSS3 | Ruby | Ruby on Rails | Git/GitHub | React | Express.js | Node.js | MongoDB | AngularJS | jQuery | Bootstrap | SQL | PostgreSQL | Heroku | Trello

Functional: Communication | Strategic Planning | Leadership | Teamwork | Managing Uncertainty | Business Development | Project Management | Social Media Marketing

----- PROJECTS (ONE WEEK AGILE SPRINTS) -----

Circle Chat | MEAN Stack Communication Platform |

Circle Chat is an Angular-based chat platform that allows users to communicate both in browser and on mobile.

vTownHall | MEN Stack Polling App |

vTownHall is an app that allows elected officials to poll their constituents about important issues or upcoming legislation. This app was built with a team where I served as lead designer and GitHub manager.

GA Missed Connections | Full CRUD Rails App |

General Assembly campuses are busy places, where student and industry people collide often without exchanging their contact information. With GA Missed Connections, users can look to make a connection with someone they met on campus and other users can identify that person and link the two together.

Simon Says | Front End Only JavaScript Game |

Web-based version of the classic Simon Says pattern matching game. Built with HTML, CSS, JavaScript, and jQuery.

----- EXPERIENCE -----

Homma Camp Company | Installation Leader | April 2016 - January 2017 | Tulsa, OK

V.Esparza Designs | Screenprinter & Project Manager | January 2015 - February 2016 | Tulsa, OK
